2023. 04.26. ONCOLOGY>PROSTATE CANCER>METASTATIC & TERMINAL. "CURE"

The doctor & researcher responsible for the treatment is "Marc Abreu". The report for the treatment was presented at the 38th edition of the Annual Congress of the Society for Thermal Medicine in San Diego, USA. The patient (Scott Miller) was treated for 6 months with the BTT technology, which consists of an Induction of Heat Shock Proteins through release of temperature by the brain; a process called BRAIN THERMAL TUNNEL (BTT) developed by Marc at Yale University in USA. After the treatment, patient's radiologist reviewed scans & informed that it is as if patient never had cancer.

Now, patient must be monitored every 6 months for 3 years to ensure that cure has taken place completely. This happened because remission is a partial cure, as some cancers can come back later.
